

Corporate Profile

From idea generation to production, Suttle works with integrity, continuously thinking of customer needs. With the goal of satisfying those needs, we imagine and produce with revolutionary solutions for outside plant, connectivity and premise distribution. Where cost is a critical competitive factor, we look beyond component price to total cost of ownership, designing for ease of installation and maintenance, reliability, and maximum product life. Our commitment to long-term relationships means we'll not only be there from the earliest planning stages, but for the life of your network.

Product Overview

Outside Plant

Technology and network needs change all the time. Suttle understands this volatility and designs outside plant solutions according to the specific needs of customers, while planning for future changes. These durable copper and fiber solutions provide ease of installation and access and the ability to expand connections in the future. Suttle's Outside Plant Solutions future-proof networks and reduce total cost of ownership.

Connectivity

With the demand for higher speeds and a desire to keep costs low, it is important for connectivity products to be efficient in all aspects. Suttle offers a variety of comprehensive high-speed copper and fiber connectivity solutions that will save service providers time and money in the long run. Tool-less termination products reduce overall install and maintenance times, while cross-connect capabilities between copper and fiber wiring leverage existing infrastructure and increase speeds.

Premise Distribution

After more than 100 years in the industry, Suttle understands that the premise distribution step in your network connection can become time-consuming and costly. To reduce these stresses, Suttle offers an extensive product line of jacks, wall plates, splitters, filters and active distribution solutions that will give your network the most efficient and cost effective solutions by utilizing existing infrastructure and accommodating to future changes.

Suttle Quality

At Suttle, quality means meeting the highest standards in manufacturing, design, performance and customer service. In our highly-competitive communications landscape, small problems can easily bloom into expensive service calls and lost customers. A reliable, well-engineered, standards-compliant connectivity product ensures that the investment dollars put into your network are not lost. Suttle designs products to the most stringent industry standards to ensure reliability and performance.

All products are engineered for compliance with and in accordance with the following specifications:

- ANSI/TIA-968-A and ANSI/TIA-1096 (included formerly in FCC Part 68 Subpart F)
- ISO 9001:2000 and TL9000 (H)R4.0/R4.0 certified
- Telcordia and SCTE-IPC specifications
- Underwriter Laboratories (UL)
- National Electrical Code (NEC)
- RoHS compliant materials
